

Protect Your Investment!

Seal 'n Lock Products

Ultra-Wet-Look NEW

User friendly, high solids, nano acrylic with urethane that produces a high enhancement, with low VOC's. Provides a durable barrier with sand joint stabilization. Contains algae and mold inhibitors.

Super-Wet

High solids, low voc, two-component commercial grade water-based pure urethane sealer that provides a protective barrier, ultimate enhancement and sand joint stabilization.

Natural-Luster

User friendly high solids, low voc, water-based urethane modified acrylic sealer with algae and mold inhibitors. Penetrates the pavers and provides a protective barrier with beautiful enhancement and sand joint stabilization.

Efflo-Remover

Efflo-Remover is a synthetic acid which is used to remove efflorescence (a whitish residue) and some rust from the surface of the pavers. Can be diluted up to 4 to 1.

Bio-Strip

Bio-Strip is a novel blend of environmentally friendly compounds (soy-based) formulated into a non-toxic, highly effective paint stripping system. Removes acrylics, enamels, epoxies, lacquers, latexes and urethanes from most substrates.

Application Spray Systems Available

1 gpm Pail Pump System

2 gpm Pail Pump System (for larger commercial projects).

Pail Pump Kart (for ease of mobility)

(See illustration on back of brochure)

All In One Day Process

- Clean
- Resand paver joints
- Seal

Environmentally Safe

- Vegetation and animal friendly
- Minimal odor
- Low VOC's

Beautiful Results

- Provides lasting color enhancement
- Adds curb appeal
- Easily maintained

Durable

- Commercial grade
- Forms a protective barrier
- Stabilizes sand joints

Convenient

- Dries faster
- Minimizes "whiting" issues from moisture

Multi-Surface Applications

- Concrete pavers and other concrete surfaces
- Clay pavers/travertine
- Natural stone
- Wall Systems

Pioneers of the Industry

Seal 'n Lock manufactures all of our products in Tampa, FL USA. We maintain quality control with our in-house chemical engineer who has 48 years experience in the coatings industry which has brought our products to be the best in the industry. We offer technical support, as well as, education to our customers.

Award Winning Installations Deserve Only the Best!

The First "ALL IN ONE DAY" Process

Cleaning • Sealing • Restoring

Restore your pavement surface to its WOW factor!

The Seal 'n Lock System...

We've recognized the need for change in the interlocking concrete paver sealing industry, not just in sealing products, but in the overall application process. The increasing demand for water-based products with low volatile organic compound (VOC) content as an alternative to solvent-based products, has generated a new technology - the "Seal 'n Lock System."

The Seal 'n Lock System is the first "All In One Day" process. This system allows you to once again enjoy your hardscape project without substantial dry times associated with other sealing products. Additionally, Seal 'n Lock products are not harmful to the environment and emits minimal odor.

Seal 'n Lock products were created by sealing professionals and experienced chemists through years of research and on-the-job testing. The result is a system that rejuvenates the beauty of your pavement surface, and provides lasting protection of your investment. You chose the best pavement system for your property, now choose the best sealing system.

PAVERS, CLAY BRICK, CONCRETE, WALL SYSTEMS, CULTURED STONE, VENEERS, NATURAL STONE, RIVER ROCK AND EXPOSED AGGREGATE.
